

**MIDTERM EXAMINATION**  
**1st Semester, AY 2026 – 2027**

**Course Title:** IT314AB - Application Development and Emerging Technologies  
**Instructor's Name:** Chiara Marie C. Canque  
**Allotted Time:** 2.5 hours  
**Highest Possible Score:** 100  
**Score per Test Part:** I - 100

**Name:** \_\_\_\_\_  
**Date:** \_\_\_\_\_

**Instructions:**

This is an **open-notes examination**. Examinees may use their existing notes and CTF 1–7 materials. **The use of AI tools and Wi-Fi/internet access is strictly prohibited during the examination.**

Continue your previous **Valorant Inbox** in Flutter, ensuring proper use of widgets, variable-based data, appropriate data types, image assets, and fallback values for missing data. Your application must also demonstrate the use of `ListView.builder`, interactive actions, conditional widgets, and navigation to a separate chatroom screen.

**Application Requirements**

Your application must include the following:

1. **Inbox Listing**
  - Replicate the provided inbox UI in Flutter.
  - Display multiple conversations using `ListView.builder` and a Dart list.
2. **Interactive Features**
  - Implement at least one meaningful interaction using `onTap` or `onPressed`.
  - Examples: mark as read or delete.
3. **Conditional UI**
  - Use boolean variables and conditional widgets to reflect message states.
  - Examples: unread indicators or online/offline status.
4. **Chatroom Navigation**
  - Use `Navigator` to open a separate chatroom screen when a conversation is selected.
  - Pass the selected conversation's data where appropriate.
  - You must be able to input a message. (No send logic yet)
5. **Data & Fallbacks**
  - Store displayed information in variables with appropriate data types.

- Provide fallback values for missing data, such as "Unknown User", placeholder images, or "No message available."

## 6. Styling & Assets

- Use appropriate widgets, assets, colors, typography, spacing, and icons to match the reference UI.

| Criteria                              | Description                                                                                                             | Points     | Score |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------|------------|-------|
| <b>UI Replication Accuracy</b>        | Accurately reproduces the provided inbox UI, including overall structure, positioning, proportions, and major elements. | <b>5</b>   |       |
| <b>Widget &amp; Layout Structure</b>  | Correctly uses appropriate Flutter widgets and layout structures to construct the interface.                            | <b>15</b>  |       |
| <b>ListView.builder</b>               | Uses <code>ListView.builder</code> to dynamically generate inbox items from a list of data.                             | <b>15</b>  |       |
| <b>Interactive Features</b>           | Implements functional interactions using <code>onPressed</code> , <code>onTap</code> , or equivalent event handlers.    | <b>15</b>  |       |
| <b>Conditional Widgets</b>            | Displays appropriate UI changes based on message states, such as read/unread, online/offline, or empty states.          | <b>15</b>  |       |
| <b>Navigator</b>                      | Selecting an inbox item navigates to a separate chatroom screen.                                                        | <b>15</b>  |       |
| <b>Data Variables &amp; Fallbacks</b> | Uses variables with appropriate data types for displayed data and provides fallback values or visuals for missing data. | <b>15</b>  |       |
| <b>Assets &amp; Styling</b>           | Correctly uses required assets and applies appropriate colors, typography, spacing, borders, and other visual details.  | <b>5</b>   |       |
| <b>Total</b>                          |                                                                                                                         | <b>100</b> |       |
